Animation can be seen as a gateway to limitless imagination. Driven by advances in computer science, the boundaries between imagination and reality will continue to fade.

For that reason, I have been fascinated by animation since a young age and have wanted to make it my career. I have the imagination to portray emotions and attitudes through film and design. I have already completed several short films both as a team and individually.

I am a hard-working person who works well under pressure and enjoys working as part of a team. I am also a reliable and punctual person with a 100% attendance record throughout education.

## EDUCATION
